(PDF) Dynamical Social Psychology: An Introduction

simply, social systems are dynamical systems. The word "dynamical" simply means time-evolving and thus a dynamical system is simply a system whose behavior evolves or changes over time. Proposing that social processes are dynamical is not new and has a long history in social psychology (e.g., Asch, 1952; Lewin, 1936; Mead, 1934). Moreover, most

Complex Dynamical Systems in Social and Personality Psychology

A dynamical system is a concept in mathematics where a fixed rule describes the time dependence of a point in a geometrical space. The mathematical models used to describe the swinging of a clock pendulum, the flow of water in a pipe, or the number of fish each spring in a lake are examples of dynamical systems.. A dynamical system has a state determined by a collection of real numbers.
