Oracle PL/SQL Quick Reference - University of Manitoba
Similar to a procedure, a PL/SQL function is a reusable program unit stored as a schema object in the Oracle Database. The following illustrates the syntax for creating a function: CREATE [OR REPLACE] FUNCTION function_name (parameter_list) RETURN return_type IS

PL/SQL Function By Practical Examples - Oracle Tutorial
PL/SQL allows the nesting of blocks, i.e., each program block may contain another inner block. If a variable is declared within an inner block, it is not accessible to the outer block. However, if a variable is declared and accessible to an outer block, it is also accessible to all nested inner blocks.

PL/SQL - Variables - Tutorialspoint
With a cursor variable, you simply pass the reference to that cursor. To declare a cursor variable, you use the REF CURSOR is the data type. PL/SQL has two forms of REF CURSOR typeS: strong typed and weak typed REF CURSOR. The following shows an example of a strong REF CURSOR.

PL/SQL Cursor Variables with REF CURSOR
PL/SQL is a procedural language designed specifically to embrace SQL statements within its syntax. PL/SQL program units are compiled by the Oracle Database server and stored inside the database. And at run-time, both PL/SQL and SQL run within the same server process, bringing optimal efficiency.

PL/SQL for Developers - Oracle Cloud
Well organized and easy to understand Web building tutorials with lots of examples of how to use HTML, CSS, JavaScript, SQL, PHP, Python, Bootstrap, Java and XML.

SQL Quick Reference - W3Schools
In PL/SQL, we can pass parameters to procedures and functions in three ways. 1) IN type parameter: These types of parameters are used to send values to stored procedures. 2) OUT type parameter: These types of parameters are used to get values from stored procedures.

PL/SQL 101: Understanding Ref Cursors Often on the forum we get a question along the lines of: "I'm passing a ref cursor back from a function, how do. ... using the ref cursor as it's reference (pointer) to the relevant query, and displaying each row of data until it had no more rows to fetch. Once it's fetched all the rows it closes the cursor.

PL/SQL 101 : Understanding Ref Cursors | Oracle Community
Describes the SQL functions that Amazon Redshift uses.

SQL reference - Amazon Redshift
There are six built-in PL/SQL data types Scalar data types - Scalar data types haven't internal components. Composite data types - Composite data types have internal components to manipulate data easily. Reference data types - This data types work like a pointer to hold some value.

PL/SQL Data Types - Oracle Data Types
PL/SQL Ref Cursors examples A ref cursor is a variable, defined as a cursor type, which will point to, or reference a cursor result. The advantage that a ref cursor has over a plain cursor is that is can be passed as a variable to a procedure or a function. The REF CURSOR can be assigned to other REF CURSOR variables.
