In SQL Server, the T-SQL POWER () function is a mathematical function that returns the value of the specified expression to the specified power. The function accepts two arguments; the first specifies the expression, the second specifies the power with which to raise that expression. The return value is the same data type as the first argument.

POWER() Examples in SQL Server | Database.Guide

1. Open command prompt and run the following command, enter the password of domain user when prompted. runas /netonly /user: Domain\username "C:\Program Files\Microsoft Power BI Desktop\bin\PBIDesktop.exe". 2. Create a saved windows credential for the SQL Server you want to connect to.
